AMR Devices are an Affordable and Time Saving Option

Our Utility Billing Software has been interfaced with several vendors of handheld computers for the purpose of meter reading.

In the past, AMR devices have been quite expensive, so most of our smaller clients have not been able to justify them. Today, there are several economical alternatives for on-site automated meter reading.

AMR PROCESS

Handheld or AMR Device: A handheld (or AMR-Automated Meter Reading) device is a small computer/equipment that can be used by the meter reader to record the reading from a meter. If you are interested in a meter-reading device that is not listed here, just let us know and we will take a look at creating an interface.

Jayhawk AMR Batch: Our software allows the user to edit readings after importing data from the handheld prior to calculation.

KEYPAD ENTRY

Keypad entry is the type where the reader manually types the reading in the handheld device and no special meter is required. The Psion Workabout Pro G2 and the DAP CE5240B are two keypad entry handhelds that we offer for purchase. Contact Jayhawk Software for more information.

Psion
Workabout Pro
2nd Generation

OTHER DEVICES

Special meters are required to utilize the following types of devices

Touch-read - touch the device to the meter with a wand to automatically record the reading
Radio-read - depending on the model, place a wand close to the meter or just drive-by the meter to automatically record the reading

A few examples of meters we interface with are listed below.

Additional meter interfaces are available. Jayhawk software can interface with ALL meter types.
