

SOFTWARE SOLUTIONS

Jayhawk Utility Suite (JUS) - Innovative billing package designed for medium to large cities or those wanting advanced reporting and unlimited expandability. (Features an integrated billing & accounting option) JUS allows users to print reports from previous billing periods at any date and time, adjust entries from previous billing periods, export reports to PDF or XLS, and much more!

Series 4 Utility Billing System (S4) - Utility billing package for small to medium cities or rural water districts. This easy-to-use package contains a number of data editing functions and user-defined options. Easy to understand menus allow the most non-technical user to access necessary reports.

Fund or Business Accounting Software - Jayhawk has partnered with Cougar Mountain Software (CMS) to provide a complete solution for cities and water districts that fully integrates with JUS. With flexible report options and integrated modules, CMS saves you time and reduces errors.

Jayhawk Court Software (JCS) - A comprehensive management solution from ticket entry to payment. Provides ability to track complete case history, including hearings, warrants, bonds, payments and notes. Detailed reporting functionality suits your statistical, financial or state reporting requirements. Includes electronic transfer of information to Motor Vehicle Department and collection agency.

Law Enforcement RMS (JUSTICE™) - A complete solution designed by Custom Micro, Inc., specifically for sheriff, police, dispatch and correctional facilities. **JUSTICE™** includes records management, mobile interfaces, jail booking, photo lineup, and civil processing. Integration with Jayhawk Court Software creates a seamless progression from dispatch through law enforcement to court, reducing margin of error, increasing efficiency and moving you toward a paperless system.

Affordable Software with Toll-Free Support - We offer population based pricing. Support agreement includes toll-free phone support with a quick response time, by friendly and helpful staff. In-house, on-site and remote training options are available.

- Cash Drawer & Receipt Printing
- Automatic Meter Reading Solutions
- Barcode Payment Scanning
- ACH & Website Utility Payments
- PCs, Printers & Bill Cards
- CASS Postage Savings

ADDITIONAL PRODUCTS AND SERVICES:

CASS CERTIFIED POSTAGE SAVINGS

JAYHAWK SOFTWARE

Increase the deliverability and quality of your mailing addresses with our new CASS Certified Postage module. Reduce rates with Automation Rate Discounts.

Jayhawk Software's CASS Certification Module Saves on Postage Fees

CASS certification is used when a mailer wants additional discounts for putting barcodes on the mail. Initial savings from first-class machinable mailings come from sorting, not from barcoding. You can receive additional discounts if you utilize CASS barcoding. The USPS does not allow you to put barcodes on your mail if you can't prove that the barcodes are based on accurate 9-digit zip codes. They don't want to give you a discount and then have to handle the mail by hand due to inaccurate barcoding.

| Software Cost Analysis for City Billing 500 Monthly | | | |
|---|--------|---|-----------|
| Yearly Bills | 6,000 | | |
| Current Postage Rate | \$0.28 | Cost @ Current Rate..... | \$1680.00 |
| Approximate CASS Rate | \$0.22 | Cost @ CASS Rate..... | \$1320.00 |
| | | Savings on Postage | \$360.00 |
| | | Yearly List Cleaning and Sorting Software Cost* | \$113.33 |
| | | Net Yearly Savings | \$246.67 |

*Utility Billing CASS Module price not included

CASS certification is the process of matching your address list to the USPS master list of zip+4 codes. CASS software is tested by the USPS to make sure it can perform a correct match even when there are errors in the address. This process also helps you fix incorrect addresses.

The USPS will accept your barcodes as accurate if you show that you recently matched your address list against their master 9-digit zip code list. Software that is approved to do this matching will print a special "CASS report" when it runs your list, showing how many addresses were attempted, how many were matched, when the matching was done, and the date of the master zip code list that was used.

How much do you save?

Initial savings will come from presorting your mailing. Additional savings are achieved by qualifying for automation rates by utilizing barcoding with your mailing. Barcoding savings range anywhere from 0.3¢ to 2.3¢ per piece. The largest barcoding savings are for mailings that have more than 150 pieces going to the same 5-digit zip code, with smaller savings for mailings that are scattered among many zip codes without 150 pieces to any one zip code.

Here's what you will need for CASS Postal Barcoding:

Barcoding Software Interface for your Jayhawk Utility Billing Software - adds Postal Barcoding as a menu selection, exports your customers addresses out of the billing software and also imports the new addresses back into the software after address verification.

List Cleaning Software - You must have accurate 9-digit zip codes for as many of your addresses as possible. You don't need to do this every time you prepare a mailing, but you must do this the first time you mail using barcodes and at least once every three to six months thereafter for every address on your list. The easiest way to get accurate 9-digit zip codes is to use an online matching service. They run your list through their matching software, and then return the matched list to you by email along with the required CASS report. (Form 3553)

CASS report (Form 3553) If you are claiming a barcoding discount for your mailing, you must keep a CASS report on file for the addresses in the mailing, and provide the report if the USPS asks for it. (Produced by CASS software or by online zip code matching services using CASS software)

Sorting Software - It will sort your list into the appropriate order for mailing. Is also the software you will use to create the barcodes, but be aware: **a barcode that Microsoft Word creates automatically is NOT the barcode you need for bulk mailing discounts!**

Barcode Font - A barcode font to print the barcodes. When you print a barcode on an envelope or label, what you are really doing is printing a string of digits using a special font that prints each digit as a set of 5 bars. (Font included in Sorting Software)

Tray Tags - for sorting your mail prior to delivering to the post office. (Generated by Sorting Software)
